

**GLOSTER'S Mistral**, designed by Danish creative Henrik Pedersen, is a subtle and sophisticated design. Pedersen likens **Mistral** to a small, standalone hideaway, and suggests combining several units, "like a small, private archipelago where you seek refuge and hang out in lazy summer days." The base is made of a tapered plantation teak platform supported by cast aluminum legs and finished in a durable, textured powder coat in a neutral Meteor color. The seating has upholstered slimline cushions and deep back cushions, and offers a selection of pillows to complete the look. The interchangeable back panels are handwoven in a distressed Koala-colored finish, and the large base can be configured as a sofa, left or right facing chaise, or a daybed. **Ambient Pebble** (left), also by Pedersen, is made from a natural stone base, which comes in either carbon (Nero Marquina) or fire (Terracotta, shown here), and comes with a resilient powder coated aluminum shade in matching meteor or terracotta. At the touch of a remote control, Pebble glows with soft luminescence. The lights can be solar charged throughout the day or plugged in with a removable cable, and the LED lighting offers varying levels of illumination.
